

# GrΣΣn My Crib

Green My Crib is a competition between sorority houses to see which chapter can make their house the most sustainable. The University of Illinois Greek community represents 23% of the undergraduate population on campus, over 7,300 students. Most of the Greek students at the University reside in their sorority or fraternity houses for at least a year. The current recycling and energy efficient efforts by sororities are lacking and with such a huge population comes responsibility. Chapters will receive points based on 4 categories: energy, waste, green purchasing, and education. It is not difficult to enact these changes and to inspire others to be conscious of their impact on our environment.

## Why care about sustainability?

1. Provides an opportunity to make campus a cleaner, healthier, and more environmentally conscious community.
2. Reduces monthly utility costs.
3. Encourages students who are the future leaders of society to impact future sustainable decisions.
4. Fulfills the Greek communities' mission and values of "ensuring our success as students and invested partners in our organizations through celebrating friendship, leadership, scholarship, service, and social advancement while appreciating the diversity of our member organizations."
