

April 4, 2018

Dear Committee Member,

I am writing to document Housing / Dining Services support of the Food Waste HTL Student Project. We have been in contact with the group on a couple of occasions and are happy to work with and assist the team.

We believe the process they are studying may be a much better solution for our food waste than our current process of aerobic digestion. Moving to a solution for our food waste that creates energy rather than using it feels to me like something we must do if possible.

I know you receive many great proposals but I encourage you to seriously consider this one. This project makes a great deal of sense to me given the volume of food waste we create. We are always working to reduce this waste, but we will always have a substantial amount.

Thank You,

Thurman Etchison

Assistant Director of Dining, Facilities and Equipment
