

Charging an ID4 at Electrify America

Since I didn't want to hit the road with out trying it first, I went to the EA site on the west side of Bloomington.

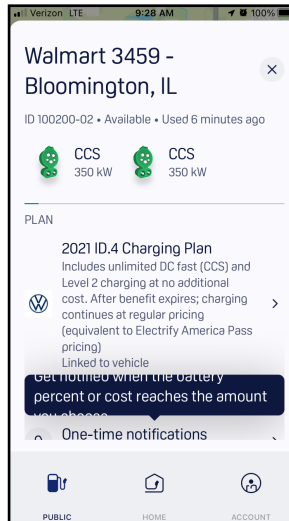

As the charger says, Plug-in first, find station on the app look for charger number at top of charger.

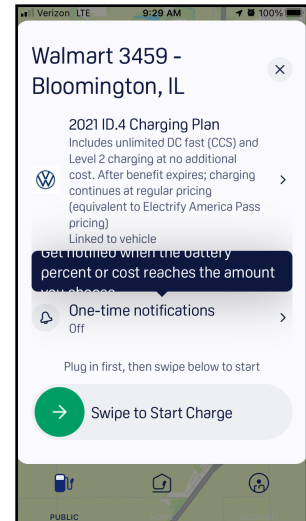

Select charger by tapping on the app.

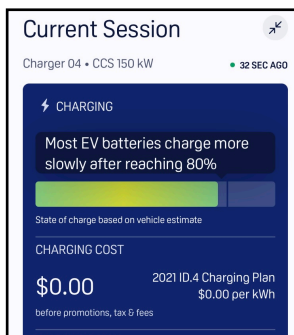

ID4 charging plan should show on the screen.

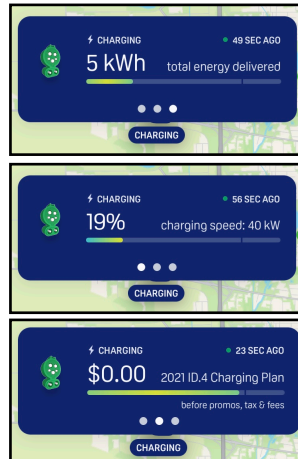

Go to bottom of page on app and swipe to start.

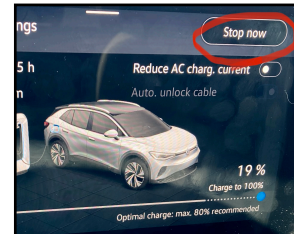

The Current Session screen pops up when charging starts.

Status of the session is up dated in the app. Swipe left or right to view the three screens.

Stop charging on the charger or the panel in the car. If plug is locked, release it using unlock on key fob.

After you're done you will get a session summary.
