Senate of the Urbana-Champaign Campus

PROPOSAL TITLE: **Sustainability General Education**

AUTHOR: Jessica Nicholson

CONTRIBUTORS: Sustainability Gen Ed Working Group, ISG Committee on Environmental Sustainability, iSEE, iCap Education SWATeam, Gen-Ed Board Working Group

COMMITTEE SPONSOR: (Ed Pol, Campus Operations, or Senate Executive Committee)

DESCRIPTION OF PURPOSE

Ensuring the well-being of our present and future generations is a large, complex and interdependent challenge that requires sustainability-based technological, social, and economic changes. It is more important than ever for our society to implement sustainable practices that preserve our environmental resources, distribute them equitably, and combat increasingly evident issues such as excessive pollution, resource overuse, and socially irresponsible practices. Rapid environmental changes due to these problems have caused subsequent issues, particularly climate change and other detrimental effects to environmental and human well-being in many communities. These effects are becoming increasingly evident and require work within all industries and circles of influence to reverse. This means that students in all fields of study at our university can benefit from sustainability education to contribute to the improvement of our environmental state. UIUC provides over 500 courses across 50+ departments related to sustainability, energy conservation and environmentalism, demonstrating that we already have many of the resources needed to implement increased sustainability education. Several schools have implemented a university-wide gen-ed or program for courses related to sustainability as shown with a list in the Appendix. The University of Illinois at Urbana-Champaign, however, has no university-wide sustainability course gen-ed. The need for increased sustainable practices and changes in industry are more relevant now than ever. We must prioritize these needs, and one of the best ways to do so is to educate students who will go on to make significant changes within their industries and circles of influence. General Education requirements can change to accommodate issues that arise in the changing social, economic and ecological environment. The

Sustainability Gen-Ed described in this proposal supports a vision to apply conceptual classroom learning along with personal experiences to provide an understanding of the impact of individual and industry-based actions on complex, real-world issues in the realm of sustainability.

PROPOSED MOTION TO CREATE GEN-ED

Let it be resolved that the University will give students in all undergraduate degree programs the option to take a 3-credit-hour gen-ed that explores questions and solutions to sustainability challenges and opportunities with relation to students' respective fields of study. This 3 credit-hour gen-ed will be a subset of the Natural Sciences and Technology general education category. Of the 6 credit hours students must take in this category, students will choose between courses in physical sciences, life sciences, and **sustainability via this proposal**. Course Explorer will list recommended courses based on a course list designated to fulfill this Sustainability General Education section. The General Education Board will work to approve courses for this list that add to an initial set of courses under consideration; the curated course list provided on page _ of this proposal. Faculty will also have the opportunity to submit their courses for approval or create new courses that fulfill this gen-ed.

SUPPORT AND RATIONALE

Due to its growing relevance, many current sustainability movements express the need for more widespread, established sustainability education. The UN developed their 17 sustainability goals in 2015 to address several sustainability-based challenges, and our University has pledged to take action to fulfill the Illinois Climate Action Plan.

The Education Objectives section (pages 124 to 139) of the Illinois Climate Action Plan outlines the need for more formal sustainability education, stating that “The multidisciplinary principles of sustainability should permeate higher education curricula. All fields — from engineering to behavioral sciences, economics to the fine arts — can be brought into the 21st century through synthesis with environmental topics.” This section goes on to share the three distinct, desired sustainability outcomes listed above as developed by the Illinois Faculty Coalition. Each desired outcome encompasses many multidisciplinary, sustainability-related principles; educational topics that are essential to equipping students with the skills needed to reach a better climate state and a more equitable society. This Sustainability Gen-Ed addition would ensure that all students benefit from the many courses offered by our university that teach sustainability topics meant to achieve these outcomes.

Many universities have already implemented similar programs that require some level of sustainability-focused education for all undergraduate students. These schools are listed in the Appendix, along with links that detail the program(s) they offer. Educational priorities change over time as our society progresses and must adapt to current situations, so these schools have taken this step to expand their sustainability education and provide undergraduates with the knowledge they need to apply sustainable principles in their careers and everyday lives. Our University must take this same step to stay on pace with the changing needs of our society.

The February 2022 STARS report for UIUC shows that we have a curriculum rating of 28.31 out of 40. Our biggest need for improvement is in the Academic Courses category, but with this gen-ed, we will have greater enrollment in our sustainability courses. This gen-ed will encourage the creation and approval of new sustainability-focused courses, which can increase our sustainability gen-ed course offerings and the Academic Courses rating in the Curriculum section of our STARS report.

Academics

Curriculum +		28.31 / 40.00
Credit	Status	Points
Academic Courses	✓ Complete	4.31 / 14.00
Learning Outcomes	✓ Complete	8.00 / 8.00
Undergraduate Program	✓ Complete	3.00 / 3.00
Graduate Program	✓ Complete	3.00 / 3.00
Immersive Experience	✓ Complete	2.00 / 2.00
Sustainability Literacy Assessment	✓ Complete	2.00 / 4.00
Incentives for Developing Courses	✓ Complete	2.00 / 2.00
Campus as a Living Laboratory	✓ Complete	4.00 / 4.00

Before our initial resolution passed through the Illinois Student Government, we conducted a random-sample student survey to gauge student awareness of environmental issues, level of education on environmental topics, and opinions on whether or not a Sustainability Gen-Ed addition would have a positive impact. 1 corresponds to “Strongly Disagree” while 4 corresponds to “Strongly Agree.” Our survey gained 464 Responses and the charted results are shown in Appendix E. We found that many students feel they are aware of the critical state of climate change, yet a significant portion feel uneducated on how they can make an environmentally sustainable impact within their field of study. 43.1% of students are unaware of the 500+ courses relating to sustainability at our university. Most importantly, however, 91.2% of students who responded either agree or strongly agree that a Sustainability Gen-Ed would have a positive impact.

SUSTAINABILITY EDUCATION DEFINITION AND TOPICS

This gen-ed will be accompanied by a sustainability definition in the context of Natural Sciences to express the purpose and educational goals of our listed courses. We want students to understand the opportunities that these sustainability general education courses can provide with experience in personal, day-to-day, and professional sustainable practices. This definition also provides a foundation to identify courses that qualify to fulfill this gen-ed.

Natural science sustainability is an examination of anthropogenic ecological change, local and global ecosystem functioning and restoration, resource (particularly non-renewable) identification and extraction, and/or our technological response to aforementioned concerns. Examples include efficiency of resource consumption, waste reduction, and pollution abatement.

The United Nations Educational, Scientific, and Cultural Organization has created an official definition in regards to **Education for Sustainable Development** that fits the goals of our gen-ed and sets the precedent for learning outcomes that can be applied to our sustainability-focused courses:

“Education for Sustainable Development empowers learners of all ages with the knowledge, skills, values and attitudes to address the interconnected global challenges we are facing, including climate change, environmental degradation, loss of biodiversity, poverty and inequality. (remove poverty, inequality for Natural Sciences? Find mentions of definition and ensure consistency) Learning must prepare students and learners of all ages to find solutions for the challenges of today and the future. Education should be transformative and allow us to make informed decisions and take individual and collective action to change our societies and care for the planet. Education for Sustainable Development is recognized as an integral element of Sustainable Development Goal 4 on quality education and is a key enabler of all other SDGs.”

We will reference these definitions in conjunction with the sustainability gen-ed option and ensure that they accurately define each course that fulfills our gen-ed. This definition lists some topics within the realm of sustainability that are valuable to sustainable development when implemented in education. In the interest of compatibility with the Natural Science and Technology gen-ed category, however, we only present some of these as educational topics our Sustainability Gen-Ed courses must focus on and our learning outcomes are based upon. In addition to the topics from both definitions, this list includes additional topics that courses can focus on to be a qualifying candidate for the sustainability gen-ed.

Educational Topics for Courses Fulfilling this Gen-Ed:

- Climate change
 - Growing prevalence of extreme weather events and rising average temperatures
 - Impact on industries
 - Technological and infrastructure adaptation to changing climate
- Environmental degradation, ecosystem disruption, changes, and resilience
 - Expansion and habitat loss
 - Endangerment of species and loss of biodiversity
 - Chemical, water, and air pollution
 - Impact on food supply
- Resource conservation and consumption
 - Reducing food waste
 - Recycling systems, infrastructure, industry
 - Reusable, reliable, and efficient products
- Human and natural ecologies / Human interaction with the ecosystem
 - Causes of food waste
 - Environmental conservation
 - Optimizing production for minimal environmental impact
 - Pesticide use
- Technological solutions to environmental problems
 - Renewable, emission-free energy
 - Carbon capture and afforestation
 - Fuel solutions
 - Hydrogen fuel cells
 - Electric vehicles and appliances
 - Energy efficiency

To extend the application of these broader topics, one or more of a courses' educational units must fall within at least one of the UN Sustainability Goals listed below in order to qualify as a course that fulfills the Sustainability Gen-Ed. While each of the 17 goals are important, these goals in particular are critical to our gen-ed in the context of Natural Sciences and Technology. Courses that qualify for our gen-ed must correlate to at least one goal from this list. The full set of 17 goals can be found in the References section of the Appendix.

UN Sustainable Development Goals as Educational Categories for this Gen-Ed:

- 2. Zero Hunger
- 3. Good Health and Well-Being
- 4. Quality Education
- 6. Clean Water and Sanitation

- 7. Affordable and Clean Energy
- 9. Industry, Innovation, and Infrastructure
- 11. Sustainable Cities and Communities
- 12. Responsible Consumption and Production
- 13. Climate Action
- 14. Life Below Water
- 15. Life on Land

LEARNING OUTCOMES

Each course that fulfills our gen-ed must accomplish one or more of the proposed set of learning outcomes listed here. Of the five core learning outcomes established by the university, the fifth learning outcome aligns with the goals of our sustainability gen-ed.

5. Global Consciousness

Definition: Illinois students will discover how complex, interdependent global systems—natural, environmental, social, cultural, economic, and political—affect and are affected by the local identities and ethical choices of individuals and institutions.

The iCap goals listed here are also outcomes for our gen-ed courses. This proposal was not created to fulfill the iCap, but it is a step towards achieving these outcomes. Many of these outcomes align with the Natural Sciences category. While a few do not, they are still critical to the sustainability sub-category as a gen-ed.

SUSTAINABILITY IN DAY-TO-DAY LIFE

1. Students will learn ways in which natural resources are used to produce what they consume, such as the food they eat, the water they drink, and the energy they use.
2. Students will understand ways in which their lifestyle and well-being are interconnected with those of diverse producers and consumers around the world, including impoverished communities.

SUSTAINABILITY KNOWLEDGE AND SKILLS

3. Students will learn core concepts of ecology and develop skills relevant to their chosen field to provide a basis for environmental sustainability.
4. Students will learn to think holistically about sustainability using perspectives across multiple disciplines.

SUSTAINABILITY AS A PERSONAL VISION

5. Students will understand relationships between global environmental and economic trends and their impact on diverse cultures and communities.
6. Students will develop an integrated vision for sustainability that embraces their personal lives, professions, local communities, and the world-at-large.

Apart from the iCap educational outcomes, these additional learning outcomes are specific to the sustainability gen-ed.

SUSTAINABILITY IN DAY-TO-DAY LIFE

7. Students will apply this knowledge in managing their resources to reduce their personal consumption and carbon footprint.
8. Students will understand how their presence impacts the ecosystem around them and how to interact with natural spaces.

SUSTAINABILITY KNOWLEDGE AND SKILLS

9. Students will be able to identify unsustainable practices and use their position(s) at their organization(s) to develop a more sustainable operation.

SUSTAINABILITY AS A PERSONAL VISION

10. Students will recognize the opportunities available to them to engage in advocacy for sustainable policies, practices, technology and more.

LIST OF COURSES TO FULFILL GEN-ED

UIUC offers many courses that focus on sustainability, energy and environment over multiple semesters. A substantial summary of these courses can be found on iSEE's course page shown in the References section that includes a comprehensive list of 548 identified courses. Many courses in this list do not require prerequisites and are eligible to fulfill our proposed gen-ed. We have filtered this list, however, to reflect courses that can fulfill our gen-ed while aligned with Natural Sciences and Technology. This filtered list is a starting point for the Gen Ed Board to approve courses that fulfill this gen-ed.

Filtered list of courses to fulfill this Gen-Ed within Natural Sciences and Technology:

<https://docs.google.com/spreadsheets/d/1M9OOfgdTmPjnZOOMaeyrEKCZEUWzyxhx/edit?usp=sharing&ouid=101372498739058214439&rtpof=true&sd=true>

548 Sustainability-Focused Courses offered since 2017:

<https://drive.google.com/file/d/1SB0qPqxWRDHDzY1rmJc0xgzTE6LuYhPk/view?usp=sharing>

CURRENT COURSE CAPACITY AND EXPECTED DEMAND

Most courses from our list have sufficient data to perform an analysis on course capacity, current demand, and expected demand. This course list below contains many of the courses listed in our filtered list above and is used in the subsequent analysis.

<https://docs.google.com/spreadsheets/d/15g6UmTj2gmW8T1L477oBW6gngRPiFFel/edit?usp=sharing&ouid=101372498739058214439&rtpof=true&sd=true>

These charts and analysis provide a comprehensive look into the current course capacity among sustainability-focused courses, occupied capacity, and expected undergraduate demand for these courses once this gen-ed proposal is implemented. Figure 1 shows the distribution of our listed sustainability-focused courses between Colleges, while Figure 2 shows the types of courses within our list. We see that these courses are distributed across multiple colleges. Most are lecture-based courses, which is ideal among gen-ed courses.

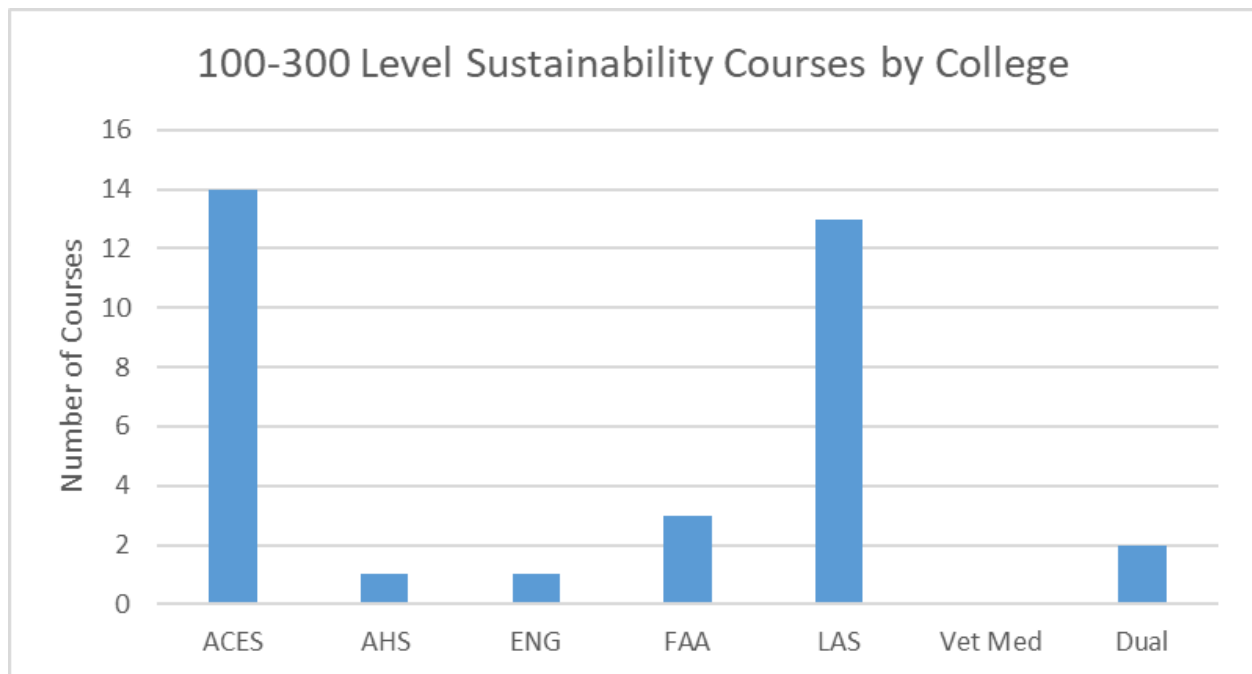

Figure 1

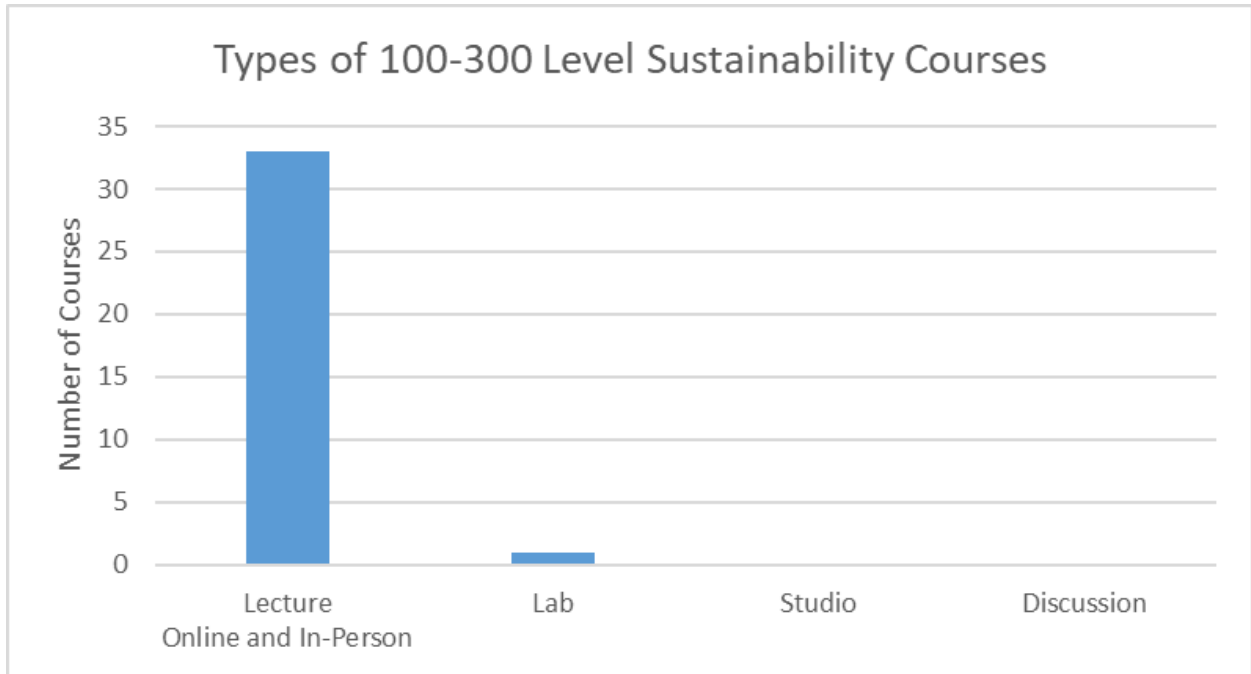

Figure 2

Figure 3 below shows the course capacity of all of our listed courses versus the enrollment in these courses for the 2020-2021 academic year. This is divided into Total capacity vs enrollment, but also separated by 100, 200, and 300 level courses. 100 and 200 level courses are most ideal as gen-ed courses, so these capacity numbers are the most relevant.

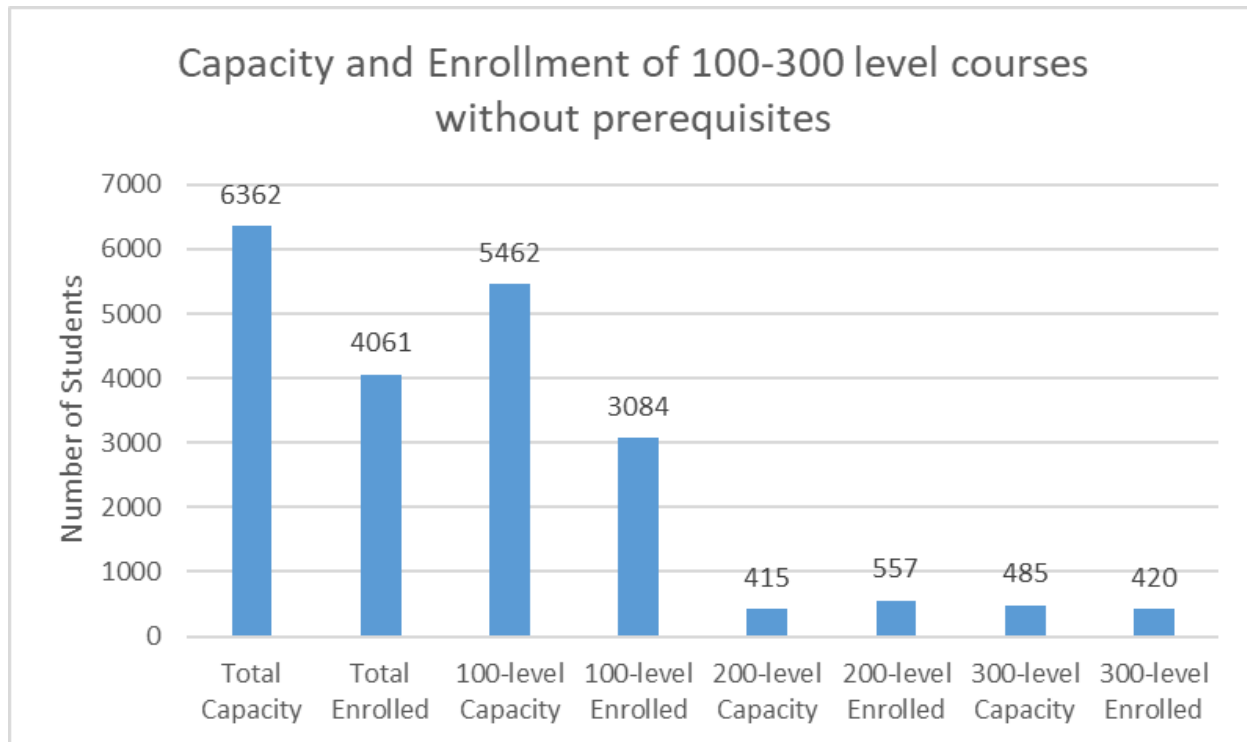

Figure 3

Our Sustainability Gen-Ed will become one of three categories within Natural Sciences and Technology, so all undergraduate students will pick two of these three categories to fulfill their 6 credit-hour requirement. We therefore project that a number of undergraduates within a range averaging 2/3rds of these students will choose to take a course from the Sustainability Gen-Ed category during one semester of their approximately 4-year undergraduate period. We understand that this is a loose assumption, however, and many factors including student preferences and course availability can influence the actual proportion of students choosing this option. Regardless, this is the best assumption we can make before we are able to gauge student preferences by measuring course enrollment once the gen-ed is implemented.

The total capacity of our filtered course list is 6,362 students as shown by Figure 3. The actual enrollment in these courses during a given academic year is 4,061, for a proportion of 0.638 representing the capacity filled. UIUC's undergraduate enrollment is steadily rising with the 2020 enrollment reaching 34,529 students. 4,061 undergraduates were enrolled in one of the sustainability-focused courses on our list during one academic year, so over a course of four years, the student enrollment in these courses would be about 16,244. This means that the proportion of undergraduate students who will take at least one of these courses is about 0.47. We can then factor in the average assumption that 2/3rds, or 0.67 of students will take one or more of these courses during their four years once our Sustainability Gen-Ed is implemented

within Natural Sciences. When our proportion rises from 0.47 to 0.67, we have a projected demand of 23,019 students that would be ideal for our course capacity to match. This is the demand over approximately four years because it is calculated as a proportion of the total undergraduate enrollment. For one academic year, the projected demand is 5,754.75.

This demand remains beneath the course capacity in our short list. While it is under, we must expect that the demand might be slightly higher than the projected demand because this demand only takes into account the students who will take these courses to fulfill the Gen-Ed. It does not consider the students who already take these courses out of choice or due to their program.

We expect that multiple other courses will be approved to fulfill the Sustainability Gen-Ed and therefore increase the available capacity. Students also choose to take a course from this category within Natural Sciences, so they have the option to choose from another of the categories in the event of inadequate capacity. This will provide time as needed to identify, create, and approve more Sustainability Gen-Ed courses once the category is implemented.

COLLEGE IMPLEMENTATION NEEDS

We as a working group invited College Deans to meet with us about college-specific needs and considerations regarding implementation of this gen-ed. Of the Deans we met with, some mentioned concerns and considerations that must be taken into account for their college in order to add the gen-ed to their curriculum. Based on our discussions, here are the considerations that must be taken upon passage of the proposal in order to best apply this gen-ed in each college. These are particularly relevant if this Sustainability Gen-Ed were to become a stand-alone requirement rather than an option within Natural Sciences and Technology.

- Course changes: Any courses under consideration to fulfill this gen-ed may require:
 - A course name change
 - Curriculum adjustments or new sections created with greater focus on sustainable principles
- Colleges will be encouraged to create new sustainability courses that can be approved as sustainability gen-ed courses to expand the options available to students.
- Future course transferability: Other universities should ideally offer courses similar to our sustainability gen-ed courses. For current courses that will fulfill our sustainability gen-ed, credits from other schools in a similar course should be transferable. Any courses created in the future specifically to fulfill this gen-ed should be proposed for other universities so students' credits can transfer to other universities as needed.

- Sustainability Minor students: If the gen-ed were to become stand-alone, Sustainability Minor students may either be exempt from this requirement or some of their Sustainability Minor courses must be compatible to fulfill the sustainability gen ed requirement.

FUTURE OF THE GEN-ED

While this proposal is a significant addition to the options students have regarding sustainability education, it adds only an elective subset to the Natural Sciences and Technology general education category. This ensures that the sustainability option does not replace any existing general education requirements nor adds additional general education hours for students to complete. Instead, students will choose 2 courses from the 3 subsets within Natural Sciences and Technology in order to fulfill the 6 credit-hour requirement; Physical Sciences, Life Sciences, and **Sustainability via this proposal**. We anticipate that this proposal will significantly increase enrollment in the many sustainability courses offered by our campus as shown by the course capacity and expected demand analysis. It will also encourage creation of new courses that cover critical sustainability topics.

Implementation of this proposal will ensure that we develop a strong foundation of course offerings in sustainability education that provide students with ample opportunities to take such courses. Our ideal final step is to build on this proposal by transitioning this gen-ed option to a stand-alone sustainability requirement. This proposal will have a significant impact, but it is also a step towards this stand-alone requirement due to the course structure we build by implementing this current proposal.

Several steps are necessary to achieve to a stand-alone requirement:

1. Pass this proposal for a sustainability option in the Natural Sciences gen-ed category
2. Propose and create a sustainability option in the Social Sciences gen-ed category
 - a. Will open our university's sustainability general education to additional topics related to social challenges within sustainability
3. Allow demand to spur the creation and approval of new sustainability gen-ed courses, measure progress
4. Once significant sustainability course structure exists, propose a stand-alone sustainability gen-ed

APPENDICES

Appendix A: Procedural Background

This Proposal was initially passed as a resolution through the Third Assembly of the Illinois Student Government.

Header Details:

RES.03.35

SENATE OF THE ILLINOIS STUDENT GOVERNMENT

OCTOBER 30, 2019

3RD ASSEMBLY

AUTHOR(S): Committee on Environmental Sustainability Chair Bugra Sahin, Senator Dana Yun, Senator Jessica Nicholson

SPONSOR(S): Senator Eleena Ahmed, Senator James Kosmopoulos, Senator Deniz Namik, Senator Nathan Poulosky, Senator John Compton, Senator Arnaldo Ayala, Senator Alissa Xiao, Senator Sudarshana Rao, Senator Alec Navickis

Appendix C: Endorsements, Sponsors, and Letters of Support

I. ISG and Academic Senate Sponsors and Endorsements

We passed the initial resolution through the Illinois Student Government during the third assembly, so below are additional sponsors and endorsements for this proposal from members of the Academic Senate and the 4th and 5th assemblies of ISG.

4th Assembly:

SPONSOR(S): Senator Creen Ahmad, Senator Tyese Braslavsky, Senator Tyler Swanson, Senator Suda Rao, Senator Enoma Egiebor, Senator Vada Gregory, Senator Nicole Arnold, Senator Bruce Rosenstock, Senator Charles Fogelman

ENDORSEMENT(S): Chair of Community and Governmental Affairs Bryce Tune

5th Assembly:

SPONSOR(S): Senator Alexandra Gergova, Senator Jack Reicherts, Senator Alexandra Nevarez, Senator Bryce Davis, Senator Greg Davidson

ENDORSEMENT(S): ISG Vice President Nicole Arnold

II. Endorsement Letter with Faculty and Organization Signatures

We, signed below, fully endorse this proposal to create a Sustainability Gen-Ed for incoming undergraduate students. Given the increasing importance of sustainability for the well-being of our society, it is critical that all students at the University become more educated on topics relating to sustainability. All of us signed faculty and registered student organizations recognize the value of sustainability education and the long-term benefit it enables students to create. This Sustainability General Education proposal will allow students to learn sustainable practices that they can apply to their careers, their personal lives, and their circles of influence. Based on this benefit, we strongly encourage the Academic Senate to pass this proposal so that the General Education Board may implement the gen-ed.

Signed,

University Faculty

The most recent STARS reports demonstrate other sustainability curriculum-based changes that several universities have made. Our university excels in nearly every category besides curriculum. To stay on par with other universities and boost our STARS curriculum score, we should consider universities who excel in this category and add this sustainability gen-ed to our undergraduate curriculum.

Here is a link to all recent STARS reports:
