**Subject:** FW: TC test bore on campus

Hi Morgan and Yu-Feng,

Ryan attended the NY-Geo webinar this morning and one of the speakers, Garen Ewbank, was talking about a TRT system that was continuously monitoring a geothermal system at a school in Urbana. Not knowing of any geothermal systems in the school district, we are thinking it is an installation on campus or affiliated with the University. Ryan mentioned Garen was logging into a remote computer and showed the screen view attached.

If you don't know where this might be, Ryan can follow up with Garen.

Andy

I think he was referring to some campus facility, but that is just my guess. Sorry the copied image didn't come through, see attached.

Hi Ryan,

I don't see an image attached. Not sure which school it is? I did not know any schools in Urbana have a geothermal system.

Andy, I was just on the NY-GEO weekly webinar and Garen Ewbank gave a presentation and showed real time borehole data from "a school in Urbana, Illinois." See screengrab below. Do you know what this project is and is the real-time data accessible to anyone? Thanks!
