

Land & Water iCAP Meeting 12/13/2022

Attendees: Nikki Palella, Carmen Ugarte, Brent Lewis, Betsy Liggett, Mickey Castigador, Therese Egner

Discussion of New Approach

- The new approach includes creating smaller groups within the iCAP team to work towards multiple recommendations at a time
- Dividing the group into two subcommittees: one for land and another for water related projects
- Work mainly over email and utilize the monthly meeting to provide updates on recommendations and ask for advice

Review of Key Priorities Document

- Brent mentioned that one parking lot needs to be cleaned and requires maintenance
- For the water subcommittee, it may be useful to create a recommendation that calls for water usage data on campus and in dorms to give the group direction on what needs to be modified
- Carmen is interested in defining soil health and what we exactly want to monitor
 - This would be a task for the land subcommittee
 - Includes IPM + organic land management

Associated Action Items: Summarize and propose this over email, asking for feedback from team members on what subcommittees and recommendations they want to pursue (Carmen + Nikki, Everyone), start the state farm center recommendation draft (Nikki + Therese), follow up on the parking lot that was mentioned (Brent)
