Time to complete

Project Questionnaire

Please provide proper and accurate information.

1. Name of project *

Soil boring database for UIUC campus

2. Date project received financial award letter *

2022-05-21

3. Date of forecasted project completion *

2025-12-31

4. Date of report submission *

2024-01-07

5. Marketing and promotion efforts to date *

None

6. Please describe project progress *

This student-led project transitioned to me from student Wenzhe (Jason) Mi when he graduated in May 2023. I have been unable to find another student lead this project. I have found a few students who may want to work on it in the 2024 Spring semester. Jason started the data entry; the amount of data to be entered has grown since the project started as more historical reports are uncovered and more work is done on campus. PRI is also reconstructing their institutional database which will delay the web delivery of the data. I will ask SSC in the 2024 Spring semester for a no-cost extension to complete the project by 2025-12-31.

7. Please describe how your project integrates student involvement and community outreach *

The students are directly involvement in creating a database that is integral to future sustainability and construction activity on the U of I campus. The University of Illinois-Chicago is also interested in duplicating the database for their soil boring records.

Project Documentation

8. Please upload updated financial documentation for your project

<https://studentengagement.illinois.edu/student-sustainability/ssc/docs/SSC-Supplemental-Budget-Timeline.xlsx> *
